Grafana Monitor Problems

Problems:

Readiness probe failed: Get grafana unhealthy
Post "http://rancher-monitoring-prometheus.cattle-monitoring-system:9090/api/v1/query_range": dial tcp 10.43.3.173:9090: connect: connection refused

Solutions:

Vấn đề là ta đang xài local dev và sẽ không có https support, vì thế khi install grafana monitoring cần phải set lại https to false:

```
+       https:
+         enabled: false
+         insecureSkipVerify: false
+         useServiceAccountCredentials: false
```

Better Solution:

- Delete Grafana since it's too heavy
