Setting Up Our K3s for our Homelab

Flow:

Flow 1: K3s Setup + Traefik + Rancher

Flow 2: Memcached, Redis Cluster

Flow 3: Setup External Storage (ZFS, Minio), Internal Storage should be deployment only, i don't use containers as storage.

Why i don't use longhorn as storage:

1. High load of network traffic, requirement of 10Gb ethernet
2. Faster & less complex management , less problems, less errors.
