

# [Solved] Nginx Proxy Manager Problems with Cannot Load Certificate

Problem 1:

```
nginx: [emerg] cannot load certificate "/etc/letsencrypt/live/npm-32/fullchain.pem": BIO_new_file() failed
```

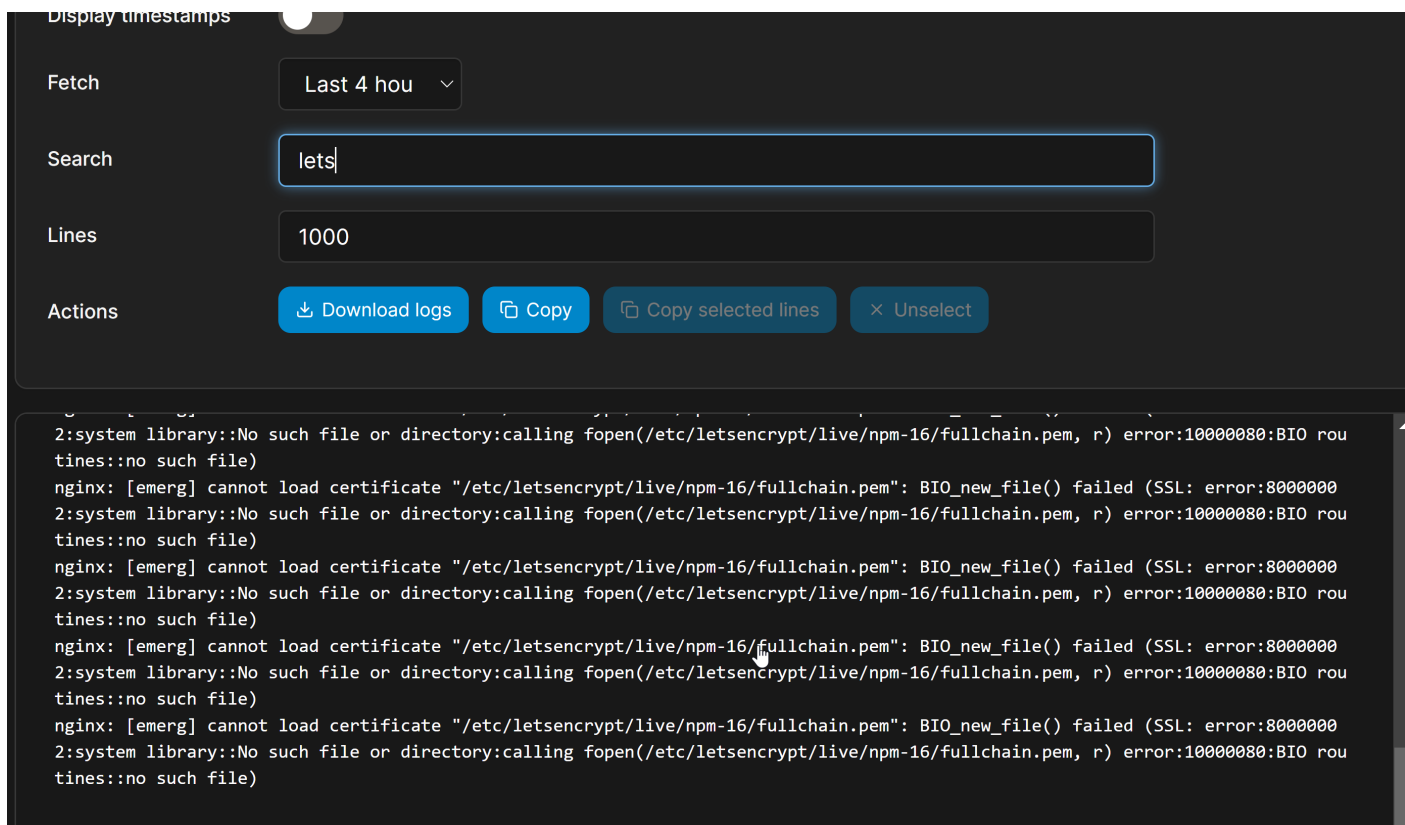

which mean nginx can't find the file existed. Maybe you have delete it on your web ui. This is a problem of nginx proxy manager :)

All you have to do is copy similar npm-xx folder into npm-yy ( yy now is 32 )

```
sudo su  
cd /home/user_name/docker/nginx_proxy_manager/letsencrypt
```

Let's navigate to where you have your letsencrypt folder by using those command above.

Now go to your check your app docker logs:

Filter the logs with letsencrypt and you will see in realtime which npm-yy is missing.

Use the command below to copy from existing npm-xx to npm-yy:

```
cp -r npm-3 npm-16
```

After you've made all the npm-yy available, you can visit back to your nginx proxy manager web ui.
